Filing Date: July 8, 2005

Docket: 1315-32 Page 5 of 14

This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims

Claims 1-23 (Canceled)

24. (Previously Presented) A combined trouser press and ironing board

assembly, comprising:

a heatable pad housed in a body;

a pressure plate, a surface of which is clampable against the heatable pad in a first

position to sandwich a garment to be pressed therebetween, one end of the pressure plate being

pivotally attached to the body to allow said plate to pivot about said one end towards and away

from the heatable pad into a second position for ironing in which the pressure plate extends

laterally outwardly relative to the heatable pad and the surface of the pressure plate, which was

facing the heatable pad in said first position, now defines a surface on which a garment is placed

for ironing;

a slide member disposed at said one end of the pressure plate; and

guide means in the body adjacent to the heatable pad, the slide member and guide means

co-operating such that the slide member slides along the guide means when the pressure plate is

moved relative to the heatable pad between said first and second positions.

25. (Previously Presented) An assembly as claimed in claim 24, wherein the

assembly includes a body housing the heatable pad and the pressure plate, wherein one end of

said pressure plate is pivotally attached to the body whereby said plate can pivot about said one

end towards and away from the heatable pad.

26. (Previously Presented) An assembly as claimed in claim 25, wherein the

guide means are configured and adapted to allow said one end of the pressure plate to slide along

opposite side edges of the heatable pad so that the pressure plate is movable into said second

ironing position.

27. (Previously Presented) An assembly as claimed in claim 26, wherein said

guide means comprises a slot along each side edge of the heatable pad.

28. (Previously Presented) An assembly as claimed in claim 27, further

comprising a support leg extending between the pressure plate and the body to support the

pressure plate in said second ironing position.

29. (Previously Presented) An assembly as claimed in claim 28, wherein one

end of said support leg is pivotally attached to the body adjacent a base thereof, an opposite end

of said support leg being slidably mounted in an underside of the pressure plate in such a manner

for longitudinal sliding therealong.

30. (Previously Presented) An assembly as claimed in claim 29, further

comprising a secondary stay pivotally attached at one end to the support leg, intermediate the

opposite ends thereof, the other end of the secondary stay having a foot thereon.

Application Serial No.: 10/541,879

Filed: July 8, 2005 Docket: 1315-32

Page 7 of 14

31. (Previously Presented) An assembly as claimed in claim 30, wherein said

secondary stay is received in a recess in the support leg.

32. (Previously Presented) An assembly as claimed in claim 31, wherein a

secondary linking member extends between the housing and the stay.

33. (Previously Presented) An assembly as claimed in claim 32, comprising a

mechanism for assisting a user to move the pressure plate into the second position.

34. (Previously Presented) An assembly according to claim 33, wherein the

mechanism includes a spring in the support leg having one end attached to the support leg and

the other end attached to the pressure plate via a flexible cord, the spring being held in tension by

the cord when the pressure plate is in its first position such that, as the pressure plate is moved

into the second position, the tension in the spring gradually reduces and helps the user draw the

pressure plate into said second position.

35. (Previously Presented) An assembly as claimed in claim 34, wherein the

pressure plate is hollow and includes a plurality of apertures in a surface on which garments are

to be ironed.

36. (Previously Presented) An assembly as claimed in claim 35, wherein the

hollow pressure plate communicates with extractor means housed in the body, the extractor

means being operable to draw steam generated during ironing from the hollow interior of the

pressure plate.

37. (Previously Presented) An assembly as claimed in claim 36, wherein the

extractor means comprises a fan connected by ducting to the hollow interior of the pressure plate

when said plate is in its second ironing position.

38. (Previously Presented) An assembly as claimed in claim 37, including a

base plate on which to place a sole plate of an iron in a stowed position, the base plate having

holes formed therein through which steam generated by the iron is drawn into a duct when the

fan is in operation.

39. (Previously Presented) An assembly as claimed in claim 38, including a

valve member in the duct, the valve being movable between a first position in which steam is

drawn only from the pressure plate into the duct by the fan and a second position in which the

steam is drawn only from the iron through the base plate into the duct by the fan, the valve

member moving into said second position when the iron is placed on the base plate.

40. (Previously Presented) An assembly as claimed in claim 39, wherein the

extractor means includes a condenser unit to remove liquid from steam drawn into the duct by

the fan.

41. (Previously Presented) An assembly as claimed in claim 40, further

comprising a water reservoir housed within the body to collect condensate from the condenser

unit.

42. (Previously Presented) An assembly as claimed in claim 41, further

comprising a pressurized steam boiler housed within the body, said boiler being connected to a

steam outlet to which at least one of a steam iron and a brush is connected.

43. (Previously Presented) An assembly as claimed in claim 42, wherein a duct

connects the water reservoir with the boiler.

44. (Previously Presented) An assembly according to claim 43, wherein the

pressure plate includes a pair of laterally extending retractable arms having clips at the ends

thereof for gripping garments placed on the pressure plate.

45. (Previously Presented) An assembly as claimed in claim 44, wherein the

body has a pair of wheels rotatably mounted thereon.

46. (Previously Presented) An assembly as claimed in claim 45, wherein a

retractable power cable is housed in the body.
